

WordPress Development Intern

Evaluation Assignment

The Expert Web Agency

Overview

Thank you for applying to the WordPress Development Internship at The Expert Web Agency. This assignment is designed to evaluate your practical skills across the areas you will be working on during the internship. Please read all instructions carefully before you begin.

Deadline: 5 days from the date you receive this assignment

Estimated Time: 4-6 hours (you do not need to complete it in one sitting)

Submission Format: A single Google Drive folder (with public view access) containing all deliverables

Scoring Breakdown

Your submission will be evaluated based on the following criteria:

Task	Description	Marks
Task 1	WordPress Page Build	25
Task 2	Bug Fixing & Troubleshooting	15
Task 3	On-Page SEO Optimization	20
Task 4	AI Content + Automation	15
Task 5	HTML/CSS/JS Challenge	15
Task 6	Bonus: Initiative & Creativity	10
	Total	100

A minimum score of 50/100 is required to move to the interview round. Candidates scoring 75+ will be given priority.

Assignment Tasks

Task 1: WordPress Landing Page Build [25 Marks]

Build a single-page landing page for a fictional local home services business (e.g., a plumbing company, roofing contractor, or landscaping service). You can pick any business type.

Requirements:

1. Use WordPress with any free theme and Elementor (free version is fine)
2. The page must include: a hero section with a headline and CTA button, an 'About Us' section, a services section (at least 3 services with icons or images), a testimonials section (use placeholder content), and a contact form using WPForms or Contact Form 7
3. The page must be mobile-responsive
4. Use a clean, professional color scheme that fits the business type
5. Add proper heading hierarchy (H1, H2, H3)

Deliverable:

- A live link to the page (use a free hosting like InfinityFree, 000webhost, or LocalWP + a tunnel like ngrok/Cloudflare Tunnel)
- OR a full-page screenshot (desktop + mobile) along with a short screen recording (2-3 min) walking through the page and the Elementor editor

Task 2: Bug Fixing & Troubleshooting [15 Marks]

Review the following code snippet from a WordPress theme's functions.php file. It has 4 intentional errors. Identify each error, explain what is wrong, and provide the corrected code.

```
// --- Buggy Code Starts ---

function custom_enqueue_scripts {
    wp_enqueue_style("main-style", get_template_directory_uri() .
"style.css");
    wp_enqueue_script("custom-js", get_template_directory_uri() .
"/js/custom.js", "jquery", "1.0", true);
}
add_action("wp_enqueue_script", "custom_enqueue_scripts");

function add_custom_meta_box() {
    add_meta_box("custom_meta", "Custom Info", "render_meta_box", "post");
}
add_action("add_meta_boxes", "add_custom_meta_box");

function render_meta_box($post) {
    $value = get_post_meta($post->ID, "_custom_field");
    echo '<input type="text" name="custom_field" value="' . $value . '"
/>';
}

// --- Buggy Code Ends ---
```

Deliverable:

- A document or text file listing each bug (numbered 1-4), what is wrong, and the corrected line of code

Task 3: On-Page SEO Optimization [20 Marks]

You are given a fictional blog post URL for a roofing company:

www.example-roofing.com/blog/roof-tips

The blog post title is: "Tips for Your Roof"

The post is about maintenance tips homeowners should follow to extend the life of their roof. Assume the page has no SEO optimization done yet.

Your task:

1. Perform keyword research and suggest 1 primary keyword and 3 secondary/LSI keywords for this page. Mention which free tool(s) you used (e.g., Ubersuggest, Google Keyword Planner, AnswerThePublic, etc.)
2. Write an optimized SEO title tag (under 60 characters) and a meta description (under 155 characters)
3. Suggest an improved URL slug for the blog post
4. Write a brief outline (bullet points) of how you would structure the blog post using proper heading tags (H1, H2, H3) incorporating the keywords naturally
5. List 3 on-page SEO improvements you would make beyond title/meta/headings (e.g., image alt text strategy, internal linking plan, schema markup, etc.)

Deliverable:

- A document with all the above clearly organized

Task 4: AI Content Generation & Basic Automation [15 Marks]

Part A: AI Content (8 Marks)

Using any AI tool (ChatGPT, Claude, Gemini, etc.), generate a 300-400 word blog intro for the roofing blog post from Task 3. Then manually edit and improve it to make it sound natural, engaging, and not AI-generated.

Submit:

- The raw AI-generated version
- Your edited final version
- A brief note (3-5 sentences) explaining what changes you made and why

Part B: Automation Concept (7 Marks)

Describe a simple automation workflow that could help a web agency. For example: "When a new WordPress form submission comes in, automatically create a row in a Google Sheet and send a Slack notification."

Your task:

1. Describe one automation idea relevant to a web/marketing agency
2. Name the tool(s) you would use to set it up (e.g., Zapier, n8n, Make, etc.)
3. Write out the workflow in simple steps (Trigger > Action 1 > Action 2, etc.)

You do NOT need to actually build this. A clear written description is sufficient.

Task 5: HTML / CSS / JavaScript Challenge [15 Marks]

Create a simple, responsive "Pricing Cards" section using only HTML, CSS, and vanilla JavaScript (no frameworks, no Bootstrap).

Requirements:

1. 3 pricing cards displayed side by side on desktop, stacked on mobile
2. Each card should have: a plan name, a price, a list of 4 features, and a CTA button
3. The middle card should be visually highlighted as the "Most Popular" plan
4. Add a toggle switch at the top that switches between "Monthly" and "Annual" pricing (Annual should show a discounted price). Use JavaScript to handle the toggle logic
5. Clean, well-commented code

Deliverable:

- A single .html file (with embedded CSS and JS) OR a CodePen/JSFiddle link

Task 6: Bonus: Initiative & Creativity [10 Marks]

This is your chance to stand out. Pick ONE of the following:

Option A:

Record a short Loom or screen recording (3-5 minutes max) where you walk through any personal project, website, or piece of work you have done. Explain what you built, what challenges you faced, and what you learned.

Option B:

Write a short note (200-300 words) on: "If you were hired as our intern, what is one process or tool you would introduce to make the agency more efficient?" Be specific and practical.

Option C:

Find one real, publicly visible SEO or website issue on theexpertwebagency.com (or any live website of your choice). Document the issue with a screenshot, explain why it matters, and suggest how to fix it.

Submission Guidelines

1. Create a Google Drive folder named: "[Your Full Name] - WP Intern Assignment"
2. Inside the folder, organize your files into sub-folders: Task 1, Task 2, Task 3, Task 4, Task 5, and Task 6 (Bonus)
3. Make sure the folder has "Anyone with the link can view" access
4. Share the folder link in your application response or email it to the address provided

Accepted file formats: .pdf, .docx, .html, .txt, screenshots (.png/.jpg), screen recordings (Loom link or .mp4)

Important Notes

- Plagiarism or fully AI-generated submissions (without editing) will result in immediate disqualification
- We value effort, clarity, and attention to detail over perfection
- If you are unsure about something, make your best attempt and explain your reasoning
- Partial submissions are accepted, but completing all tasks will significantly improve your chances
- If you have any questions about the assignment, reply to the email you received it from

Good luck! We look forward to reviewing your work.

- The Expert Web Agency Team
